

Merchant's API Implementation Guide

Version 1.1

Statement of Confidentiality

This document contains information that is proprietary and confidential to Avenues India Private Limited which shall not be disclosed, transmitted, or duplicated, used in whole or in part for any purpose other than its intended purpose. Any use or disclosure in whole or in part of this information without express written permission of Avenues India Private Ltd is prohibited. Any other company and product names mentioned are used for identification purposes only, and may be trademarks of their respective owners.

CCAvenue API

The CCAvenue API is designed to enable you to interact securely with our API from your client-side web application. You can get XML, JSON or String responses from the API, including errors.

You need an active account to initiate an API call to the CCAvenue payment gateway.

API Authentication

Merchant needs an active account to initiate an API call to the CCAvenue payment gateway. Merchants will have to log in to their CCAvenue M.A.R.S account and get the authentication credentials for initiating API calls.

Merchant must provide CCAvenue with the public IP address from where the API calls will be initiated. API calls will work only after CCAvenue registers the IP address provided.

Login to your CCAvenue M.A.R.S account, under Settings tab -> API Keys page; copy the following credentials:

- 1. Merchant ID
- 2. Access Code
- 3. Encryption Key

API Calls

CCAvenue API supports following API calls.

- Confirm The Confirm API call allows you to confirm a pending order. Only confirmed orders are settled into the merchant's account. An order older than 12 days is automatically cancelled. Once an order has been auto-cancelled by the system, it cannot be confirmed.
- 2. <u>Cancel</u> The Cancel API call allows you to cancel a pending order. Funds will be refunded to the credit card or debit card or net banking account that was originally charged. An order older than 12 days is automatically cancelled.
- 3. <u>Refund</u> The Refund API call allows you to refund an order/transaction that has previously been executed but not yet refunded. Funds will be refunded to the credit card or debit card or net banking account that was originally charged.
- 4. <u>Status</u> The Status API call can be used to ascertain the status of a transaction/order. You can use this call if you have not received status/information for a transaction request. It can also be used as an additional security measure to reconfirm the parameters posted back.
- 5. Order Lookup The Order Lookup API call can be used to find transactions/orders based on given criteria.
- 6. <u>Pending Orders</u> The Pending Orders API call can be used to list transactions which are yet to be confirmed or cancelled. Pending orders need to be confirmed for them to be settled, those older than 12 days are automatically cancelled.
- 7. <u>Get Customer Payment Option</u> The Customer payment option API call is used to list payment options saved for a customer. Payments options are saved for a customer in the vault for easy and convenient payment.
- 8. <u>Delete Customer Payment Option</u> The Delete Customer Payment Option API call is used to delete a particular payment option saved for the customer.
- 9. <u>Delete Customer</u> The Delete Customer API call is used to delete all saved payment options for the customer.
- 10. <u>Generate Invoice</u> The Invoice API call is used to generate an invoice for a customer. Values can be passed as for generating invoice using the flexibility of Invoice Settings.
- 11. <u>Generate Recurring Invoice</u> Recurring invoice call is used to generate recurring invoice for a customer of a merchant .

- 12. <u>Generate Quick Invoice</u> This Quick Invoice API call is used to generate a quick invoice for a customer. This is a flavour of regular invoice but with limited options; hence an easy implementation.
- 13. <u>Get Item List</u> The Item list API call is used to find the list of configured Items and task for merchant. The items and tasks are used to create a regular Invoice or a recurring invoice.
- 14. <u>Invoice Lookup</u> Invoice Lookup API call is used to find list of invoice order lookup details of orders.
- 15. <u>Update Merchant Invoice Reference No</u> Update Invoice reference Number API call is used to update Invoice reference number if the same was not provided at the time of invoice generation.
- 16. <u>Update Merchant Param</u> Update Merchant params API is used to add some extra parameter against Merchant params if the same could not be done at the time of the transaction.
- 17. <u>Update Billing Details</u> Update billing details API call is used to update customer billing information against an order.

Production API URL:-https://login.ccavenue.com/apis/servlet/DoWebTrans

Staging API URL:-https://180.179.175.17/apis/servlet/DoWebTrans

Encryption of Request for API Calls

Requests sent to CCAvenue will hold the parameters mentioned in the table below. enc_request, has to be encrypted using AES similar to the method used for real-time transaction. Encryption key is mapped to Access code as mentioned in API Authentication section.

Name	Description
<pre>enc_request(required)</pre>	AES encrypted request data.
access_code(required)	This is the access code for your application. You must send this with each request.
command(required)	This is the command to access the API Calls. You must send this with each request.
request_type(required)	API requests are accepted in XML, JSON or String. Specify the request type.
response_type(optional)	API returns XML, JSON or String responses. If left blank, the response will be in the same format as request.
version(required)	This is the version to access API based on version calls and current possible values is 1.1

Example:

 $\label{eq:condition} \begin{array}{l} \textbf{enc_request} = 63957 \\ \textbf{F} \\ \textbf{5} \\ \textbf{D} \\ \textbf{0} \\ \textbf{E} \\ \textbf{0} \\ \textbf{0}$

Decryption of Response for API Calls

Response received from CCAvenue will hold the parameters mentioned in the table below. enc_response, when encrypted will have to be decrypted using AES similar to the method used for real-time transactions. Encryption key is mapped to Access code as mentioned in API Authentication section.

Name	Description	
enc_response	AES encrypted response containing format as per response_type.	
enc_error_code	enc_error_code contains value if status is "1" please refere below table for the error code.	
status	This states whether the call was successful or not. If value of this parameter is "1" then you need not decrypt the enc_response as it will contain plain error message.	

Note: - Possible refer <u>below table</u> for enc_response value when status value is "1" as follows.

Example:

Successful:

status=0&**enc_response**=63957FB55DD6E7B968A7588763E08B240878046EF2F520C44BBC63FB9CCE726 209A473457E6B13721EC6D05ED13A0483ACFDD6F11F284AE79755D47E79687478F93CFCD3CD97510B6 7B961CDB5279F209F5C451F3039696F13C990B963854C8CADF730&**enc_error_code**=

Error:

status=1&enc_response=Access_code: Invalid Parameter&enc_error_code=51407.

1. Confirm

Confirm API call allows you to confirm a pending order. Only confirmed orders are settled into the merchant's account. An order older than 12 days is automatically cancelled. Once an order has been auto-cancelled by the system, it cannot be confirmed. You can optionally confirm only part of an order. Remember, you can do so only once. Remaining funds will be refunded to the credit card or debit card or net banking account that was originally charged.

Request Parameters

Name	Description	Note
enc_request	AES encrypted string containing request	
(required)	parameters.	
access_code	Unique CCAvenue access code which is	
(required)	generated when merchant registered their IP	
	address. You must send this with each	
	request.	
request_type	API requests are accepted in XML, JSON or	Possible value for request_type is
(required)	String. Specify the request type.	"XML" or "JSON" or "STRING".
response_type	API returns responses in XML, JSON or String	Possible value for response_type
(optional)	format. If left blank, the response will be in	is "XML" or "JSON" or "STRING".
	the same format as request.	
Command	Command value specifies the API calls. You	Possible value for this API call is
(required)	must send this with each request.	"confirmOrder".
reference_no	Unique CCAvenue reference number for the	Numeric(25)
(required)	transaction.	
amount	Transaction amount to be captured. Amount	Decimal(12,2)
(required)	can be full or partial of the transaction	
	amount.	

Example XML Request

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Example JSON Request

{

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Example STRING Request

Format: reference_no\$amt|reference_no\$amt|

Example: 203000099429\$1.00|203000104640\$1.00|

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Response Parameters

Name	Description	Note
status	This states whether the call was successful or not. If value of this parameter is "1" then you need not decrypt the enc_response as it will contain plain error message.	Value "0" denotes that the API call was successful. Value "1" denotes API call failure. On enc_response is plain text represents the error message.
enc_response	AES encrypted response containing format as per response_type	
success_count	Merchant checks the successfully processed records for confirmation of the transactions.	Numeric 0<=success_count<= Number of orders to be confirmed.
reference_no	Unique CCAvenue reference numbers for the transaction.	Numeric(25)
reason	Failure reason if the given unique reference_no not going to confirm.	String Please refer below table for failure message.
error_code	Error code for Failure.	String Please refer <u>below table</u> for failure message.

Example XML Response

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

Example JSON Response

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

Example STRING Response

Format: success_count|error_code\$reference_no\$reason^error_code\$reference_no\$reason|

Example: 0|51304 \$123456788\$ Invalid order/tracking id ^51206\$123456788\$Order List: Invalid Parameter|

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

2. Cancel

Cancel API call allows you to cancel a pending order. An order older than 12 days is automatically cancelled. Once an order has been cancelled/auto-cancelled by the system, it cannot be confirmed. Funds will be refunded to the credit card or debit card or net banking account that was originally charged.

Request Parameters

Name	Description	Note
enc_request (required)	AES encrypted request data	
access_code (required)	Unique CCAvenue access code which is generated when merchant registered their IP address. You must send this with each request.	
request_type (required)	API requests are accepted in XML, JSON or String. Specify the request type.	Possible value for request_type is "XML" or "JSON" or "STRING".
response_type (optional)	API returns responses in XML, JSON or String format. If left blank, the response will be in the same format as request.	Possible value for response_type is "XML" or "JSON" or "STRING".
Command (required)	Command value specifies the API calls. You must send this with each request.	Possible value for this API call is "cancelOrder"
reference_no (required)	Unique CCAvenue reference number for the transaction.	Numeric(25)
amount (required)	Transaction amount to be captured. Amount can be full or partial of the transaction amount.	Decimal(12,2)

Example XML Request

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Example JSON Request

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Example STRING Request

Format: reference_no\$amt|reference_no\$amt|

Example: 203000099429\$1.00|203000104640\$101.23|

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Response Parameters

Name	Description	Note
status	This states whether the call was successful or	Value "0" denotes that API call is
	not. If value of this parameter is "1" then you	successful.
	need not decrypt the enc_response as it will	Value "1" denotes API call failure.
	contain plain error message.	On enc_response is plain text that
		represents the error message.
enc_response	AES encrypted response containing format as	
	per response_type	
success_count	Merchant checks the successfully processed	Numeric
	records for cancellation of the transactions.	
		0<=success_count<=
		Number of orders for the cancel
		request.
reference_no	Unique CCAvenue reference number for the	Numeric(25)
	transaction.	
reason	Failure reason if given reference_no are not	String
	going to cancel successfully.	Please refer <u>below table</u> for
		failure message.
error_code	Error code for Failure reason.	String
		Please refer below table for
		failure message.

Example XML Response

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

Example JSON Response

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

Example STRING Response

Format: success_count|error_code\$reference_no\$reason^error_code\$reference_no\$reason|

Example: 0|51304 \$123456788\$ Invalid order/tracking id ^51206\$123456788\$Order List: Invalid Parameter|

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

3. Refund

The Refund API call allows you to refund an order/transaction that has previously been executed but not yet refunded. Funds will be refunded to the credit card or debit card or net banking account that was originally charged.

Request Parameters

Name	Description	Note
enc_request	AES encrypted request data	
(required)		
access_code	Unique CCAvenue access code which is	
(required)	generated when merchant registered their IP	
	address. You must send this with each	
	request.	
request_type	API requests are accepted in XML, JSON or	Possible value for request_type is
(required)	String. Specify the request type.	"XML" or "JSON" or "STRING".
response_type	API returns XML, JSON or String responses. If	Possible value for response_type
(optional)	left blank, the response will be in the same	is "XML" or "JSON" or "STRING".
	format as request.	
command (required)	Unique name which specifies the API Call. You	Possible value for command to
	must send this with each request.	this API call is "refundOrder".
reference_no	Unique CCAvenue reference number for the	Numeric(25)
(required)	transaction.	
refund_amount	Transaction amount to be refund. Amount can	Decimal(12,2).
(required)	be full or partial of the transaction amount.	
refund_ref_no	Unique reference number shared by merchant	AlphaNumeric(30)
(required)	to refund the captured transaction amount.	

Example XML Request

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Refund_Order_Query reference_no="1236547" refund_amount="1.0" refund_ref_no="API1234">
</Refund_Order_Query>
```

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Example JSON Request

```
{
    "reference_no":"1236547",
    "refund_amount":"1.0",
    "refund_ref_no":"API1234"
}
```

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Example STRING Request

Format: reference_no|refund_amount|refund_ref_no|

Example: 203000094245 | 1.00 | API1234 |

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Response Parameters

Name	Description	Note
status	This states whether the call was successful or not. If value of this parameter is "1" then you need not decrypt the enc_response as it will contain plain error message.	Value "0" denotes the API call was successful. Value "1" denotes API call failure. On enc_response is plain text represents the error message.
enc_response	AES encrypted response containing format as per response_type	
refund_status	Refund status specifies whether given refund request is going to succeed or fail.	Numeric Value "0" denotes refund was successful Value "1" denotes refund was failure.
reason	Failure reason if the refund request is going to fail for the transactions.	String Please refer <u>below table</u> for failure message.
error_code	Error code for Failure reason.	String Please refer <u>below table</u> for failure message.

Example XML Response

Success Response:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Refund_Order_Result reason="" refund_status="0" reason="" error_code=""/>
```

Failure Response:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Refund_Order_Result reason="Reference number: Invalid Parameter" refund_status="1"
error_code="51310"/>
```

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

Example JSON Response

Success Response:

{

```
"reason":"",
    "error_code":"",
    "refund_status":0
}

Failure Response:
{
    "reason":"Reference number: Invalid Parameter",
    "error_code":"51310",
    "refund_status":1
}
```

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

Example STRING Response

Success Response:

Format: refund_status|

Example: 0

Failure Response:

Format: refund_status|error_code|reason|

Example: 1|51310|Reference number: Invalid Parameter|

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to

the decryption section.

4. Status

The Status API call can be used to ascertain the status of a transaction/order. You can use this call if you have not received status/information for a transaction request. It can also be used as an additional security measure to reconfirm the parameters posted back.

Request Parameters

Name	Description	Note
		Parameters Datatype (Parameters
		max length)
enc_request	AES encrypted request data	
(required)		
access_code	Unique CCAvenue access code which is	
(required)	generated when merchant registered their IP	
	address. You must send this with each	
	request.	
request_type	API requests are accepted in XML, JSON or	Possible value for request_type is
(required)	String. Specify the request type.	"XML" or "JSON" or "STRING".
response_type	API returns responses in XML, JSON or String	Possible value for response_type
(optional)	format. If left blank, the response will be in	is "XML" or "JSON" or "STRING".
	the same format as request.	
command (required)	Command value specifies the API calls. You	Value is "orderStatusTracker".
	must send this with each request.	
reference_no	CCAvenue reference no allocated to the	Numeric(25).
(conditional)	transaction.	
	Reference number is required if you doesn't	
	share order_no.	
order_no (conditional)	This is the merchant reference number for the	AlphaNumeric with special
	transaction.	characters (hyphen and
		underscore)(30).
	Order number is required if you doesn't share	
	reference_no.	

Example XML Request

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Order_Status_Query order_no="33231644" reference_no="225013271813"/>
```

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Example JSON Request

```
{
    "reference_no": "225013271813",
    "order_no": "33231644"
}
```

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Example STRING Request

Format: reference_no|order_no|

Example: 225013271813 | 33231644 |

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Response Parameters

Name	Description	Note
status	This states whether the call was successful or	
	not. If value of this parameter is "1" then you	
	need not decrypt the enc_response as it will	Value "1" denotes API call failure.
	contain plain error message.	On enc_response is plain text
		represents the error message.
enc_response	AES encrypted response containing format as	
order_amt	per response_type Amount for the transaction.	Decimal(12,2).
order_bill_address	Order billing address details for the order.	Possible value for address is
	G. a.c. 2	Alphanumeric with special
		characters (space, hyphen,
		comma, ampersand(&), hash(#),
		circular brackets and dot)(315)
order_bill_city	Order billing City name for the order.	Possible value for city is
		Alphanumeric with special
		characters (space, comma,
		hyphen and dot)(30).
order_bill_country	Order billing country for the Order.	Possible value for country is
		Alphanumeric with special
		characters (space)(30).
order_bill_email	Email Address of the Order for notifications.	Possible value for email id is
		Alphanumeric with special

		characters (hyphen, underscore,
		dot, @)(70).
order_bill_name	Order billing name for the order.	Possible value for name is
		Alphanumeric with special
		characters (space, hyphen,
		apostrophe, underscore, dot)(60).
order_bill_state	Order billing state for the order.	Alphanumeric with special
		characters (hyphen, dot and
		space)(30).
order_bill_tel	Order billing telephone no for the order.	Numeric(10)
order_bill_zip	Order billing address's pincode for the order.	Possible value for zip is
		AlphaNumeric with special
		characters(hyphen and space)
		(15).
order_capt_amt	Captured amount for the transaction. Capture	Decimal(12,2).
	amount can be full or partial of the transaction	
	amount.	
order_curr	Possible order Currency in which merchant	String
	processed the transaction.	Examples:
		INR – Indian Rupee
		USD – United States Dollar
		SGD – Singapore Dollar
		GBP – Pound Sterling
		EUR – Euro, official currency of
		Eurozone
order_date_time	Order Generated Date &Time.	DateTime in IST(yyyy-MM-dd
		HH:mm:ss.SSS) format.
order_device_type	This is the type of device using which the	Possible value for device type is
	transaction was processed.	IVRS/MOB/PC.
order_discount	This is Discount Value for the Order No.	Decimal(12,2).
order_fee_flat	Flat Fee for the Order No.	Decimal(12,2).
order_fee_perc	Provides the percentage fee for the same	Decimal(12,2).
	order No.	
order_fee_perc_value	This attribute provides the percentage fee	Decimal(12,2).
	Value for the same order No.	
order_fraud_status	Specify whether orders are valid or not.	String
		Possible Values are:
		1) Value " High " denotes "High
		Risk"
		2) Value " Low " denotes "Low
		Risk"
		3) Value " NR " denotes "No Risk"
		4) Value " GA " denotes "Go
		Ahead"
		5) Value " NA " denotes "Not

		Applicable"
order_gross_amt	Total transaction amount.	Decimal(12,2).
order_ip	Customer IP Address (i.e. from where	IP V-4 Supported.
	transaction is being initiated)	
order_no	Order No for the transaction.	AlphaNumeric with special
		characters(hyphen and
		underscore)(30).
order_notes	Order information you wish to provide.	AlphaNumeric with special
		characters (space, comma, dot,
		hyphen and underscore)(60).
order_ship_address	Shipping Address for the order.	Possible value for address is
		Alphanumeric with special
		characters (space, hyphen,
		comma, ampersand(&), hash(#),
		circular brackets and dot)(315)
order_ship_city	Shipping city name for the orders.	Possible value for city is
		Alphanumeric with special
		characters (space, comma,
		hyphen and dot)(30).
order_ship_country	Shipping country name for the orders.	Possible value for country is
		Alphanumeric with special
		characters (space)(30).
order_ship_email	Shipping email ID for the notifications of the	Possible value for email id is
	transaction.	Alphanumeric with special
		characters (hyphen, underscore,
		dot, @)(70).
order_ship_name	Shipping Name of the Customer for the order.	Possible value for name is
		Alphanumeric with special
		characters (space, hyphen,
		apostrophe, underscore, dot)(60).
order_ship_state	Shipping state for the order.	Alphanumeric with special
		characters (hyphen, dot and
		space)(30).
order_ship_tel	Telephone no for notifications of the	Numeric(10).
	transaction.	
order_ship_zip	Order shipping address's pin code for the	Possible value for zip is
	order.	AlphaNumeric with special
		characters(hyphen and space)
		(15).
order_status	Status of the order. It can be single or multiple	.String
		Possible values are:
		Aborted (transaction is cancelled
		by the User)
		Auto-Cancelled (transaction has
		not confirmed within 12 days

		hence auto cancelled by system)
		Auto-Reversed (two identical
		transactions for same order
		number, both were successful at
		bank's end but we got response
		for only one of them, then next
		day during reconciliation we mark
		one of the transaction as auto
		reversed)
		Awaited (transaction is processed
		from billing shipping page but no
		response is received) Cancelled (transaction is
		cancelled by merchant)
		Chargeback()
		Invalid(Transaction sent to
		CCAvenue with Invalid
		parameters, hence could not be
		processed further)
		Fraud (we update this during
		recon, the amount is different at
		bank's end and at CCAvenue due
		to tampering)
		Initiated (transaction just arrived
		on billing shipping page and not
		processed further)
		Refunded (Transaction is refunded.)
		Shipped (transaction is
		confirmed)
		Successful
		System refund (Refunded by
		CCAvenue for various findings of
		reversals by CCAvenue)
		Unsuccessful (transaction is not
		successful due to)
	This is the latest date and time when order	DateTime in IST(yyyy-MM-dd
	status is modified.	HH:mm:ss.SSS) format.
_	Amount of TDS (tax deducted at source) for	Decimal (13,4)
	the Transaction.	Decimal (12.4)
order_tax	Tax Amount for the Transaction. CCAvenue reference no allocated to the	Decimal (13,4) Numeric(25).
reference_no	transaction.	inumenc(25).
	Unique reference number shared by Bank	Numeric(25).
order_bank_rer_no	after successful transaction.	rumenc(23).
order_bank_response	Description about the transaction shared by	String
oraci_bank_response	pescription about the transaction shared by	Pung

	the bank after transaction.	
order_gtw_id	Unique payment option Bank name.	Alphabet(6)
order_card_name	Specify the card name for the transaction.	Possible value for card name is VISA","MASTERCARD","AMEX","J CB","ECRD","DINERS CLUB","CVMS".
order_option_type	Specify the payment option type for the order.	String Possible value for payment option type is
		OPTCASHC-Cash card OPTCRDC -Credit Card OPTDBCRD-Debit Card OPTEMI-EMI OPTIVRS-IVRS OPTMOBP-MobilePayments OPTNBK-Net Banking
page_count	Total pages available based on no_of_records in the request	Example: no_of_records sent in request was 100
total_records	Total no.of orders matching the lookup criteria	<u> </u>
error_desc	Reason if search criteria did not find the orders for the transactions.	
error_code	Error code for Failure reason.	String Please refer <u>below table</u> for failure message.

5. Order Lookup

The Lookup API call can be used to extract transaction details for a certain set of transactions. The functionality works similar to a search feature.

Request Parameters

Name	Description	Note
enc_request	AES encrypted request data	
(required)		
access_code	Unique CCAvenue access code which is	
(required)	generated when merchant registered their IP	
	address. You must send this with each	
	request.	
request_type	API requests are accepted in XML, JSON or	Possible value for request_type is
(required)	String. Specify the request type.	"XML" or "JSON" or "STRING".
response_type	API returns responses in XML, JSON or String	Possible value for response_type
(optional)	format. If left blank, the response will be in	is "XML" or "JSON" or "STRING".
	the same format as request.	
Command	Command value specifies the API calls. You	Possible value for this API call is
(required)	must send this with each request.	"orderLookup".
reference_no	Unique CCAvenue reference number for the	Numeric(25).
(optional)	transaction.	
from_date	Provide the Start Date to find the orders list.	Date must be in IST(dd-mm-yyyy
(required))format.
to_date	Provide the end date to search the orders	Date must be in IST(dd-mm-yyyy)
(optional)	between from date and to date. It should be	format.
	greater than or equal to from date.	
order_currency	Currency in which you processed the	String
(optional)	transaction. You can send the multiple	
	currencies format.	Example:
		INR – Indian Rupee
		USD – United States Dollar
		SGD – Singapore Dollar
		GBP – Pound Sterling
		EUR – Euro, official currency of
		Eurozone
		Multiple currency format:
		INR USD GBP in JSON & XML
		request type but INR\$USD\$GBP in
		STRING request type
order_email	Email address used to purchase the order.	Alphanumeric with special
(optional)	Linan address used to purchase the order.	characters (hyphen, underscore,
(optional)		characters (hyphen, underscore,

		dot, @)(70).
order_fraud_status (optional)	Specify whether orders are valid or not.	String Possible Values are:
(Cartierium)		1) Value " High " denotes "High Risk"
		2) Value " Low " denotes "Low Risk"
		3) Value "NR" denotes "No Risk"
		4) Value " GA " denotes "Go Ahead"
		5) Value " NA " denotes "Not
		Applicable"
order_min_amount	Minimum amount limit for search criteria for	Decimal(12,2).
(optional)	the transaction.	D 1/4.2.2)
order_max_amount (optional)	Maximum amount limit for search criteria for the transaction.	Decimal(12,2).
order_name	Customer name for the transaction.	Alphanumeric with special
(optional)		characters (space, hyphen,
		apostrophe, underscore, dot)(60).
order_no	Unique merchant order no for the transaction.	1
(optional)		characters(hyphen and underscore)(60).
order_payment_type (optional)	Payment Mode for the transaction. It can be single or multiple.	String
		Below are the Possible Values:
		1) CASHC (Cash Card Payment
		Type)
		2) CRDC (Credit Card Payment
		Type)
		3) DBCRD (Debit Card Payment
		Type)
		4) MOBP (Mobile Payment Type)
		5) NBK (Net Banking)
		Multiple values format:
		MOBP NBK for JSON & XML
		request type but MOBP\$NBK for
		STRING request type.
order_status	Status of the order. It can be single or	String
(optional)	multiple.	Possible values are:
		Aborted (transaction is cancelled
		by the User)
		Auto-Cancelled (transaction has
		not confirmed within 12 days
		hence auto cancelled by system)

		Assta Davisiand (In a till set al.
		Auto-Reversed (two identical
		transactions for same order
		number, both were successful at
		bank's end but we got response
		for only one of them, then next
		day during reconciliation we mark
		one of the transaction as auto
		reversed)
		Awaited (transaction is processed
		from billing shipping page but no
		response is received)
		Cancelled (transaction is
		cancelled by merchant)
		Chargeback()
		Invalid(Transaction sent to
		CCAvenue with Invalid
		parameters, hence could not be
		processed further)
		Fraud (we update this during
		recon, the amount is different at
		bank's end and at CCAvenue due
		to tampering)
		Initiated (transaction just arrived
		on billing shipping page and not
		processed further)
		Refunded (Transaction is
		refunded.)
		Shipped (transaction is
		confirmed)
		Successful
		System refund (Refunded by
		CCAvenue for various find of
		reversals by CCAvenue)
		Unsuccessful (transaction is not
	To a of the code of	successful due to)
order_type	Type of the order.	String
(optional)		5.55
		Different types of Orders:
		1) OT-INV denotes "Invoice"
		2) OT-ORD denotes "Orders"
		3) OT-ORDS C denotes "Shopping
		3) OT-ORDS C denotes "Shopping Cart Orders"
		3) OT-ORDS C denotes "Shopping Cart Orders" 4) OT-PPAY denotes" Phone Pay"
order_bill_tel	Customer mobile number for the transaction.	3) OT-ORDS C denotes "Shopping Cart Orders"

(optional)		
page_number	A limited number of records are shared as part Numeric(4).	
(required)	of the response. The total records & number	
	of pages are shared as part of the response to	
	enable subsequent calls.	

Example XML Request

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Order Lookup Query>
   <order no>xxxxxxxx</order no>
   <reference no>xxxxxxxxx</reference no>
   <order email>xxx@xxxxx.com</order email>
   <order bill tel>xxxxxxxxxxx</order bill tel>
   <order_country>xxxxx</order_country>
   <from_date>xx-xx-xxxx</from_date>
   <to_date>xx-xx-xxxx</to_date>
   <order_max_amount>xx.xx</order_max_amount>
   <order_min_amount>xx.xx</order_min_amount>
   <order status>xxxxxxx</order status>
   <order fraud status>xxxx</order fraud status>
   <order currency>xxx</order currency>
   <order type>xx-xxx</order type>
   <order_payment_type>xxxxxx</order_payment_type>
   <page number>1</page number>
</Order_Lookup_Query>
```

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Example JSON Request

```
{
    "order no": "xxx",
    "reference no":"xxxxx",
    "order email": "xxx@xxxx.com",
    "order bill tel": "xxxxxxxxxx",
    "order_country": "xxxxxxx",
    "from_date": "xx-xx-xxxx",
    "to_date": "xx-xx-xxxx",
    "order_max_amount": "xx.xx",
    "order_min_amount": "xx.xx",
    "order status": "xxxxx",
    "order fraud status": "xxxx",
    "order currency": "xxx",
    "order_type": "xxxxxx",
    "order payment type": "xxxxx",
    "page number":1
}
```

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Example STRING Request

Format:

reference_no|order_no|from_date|to_date|order_status|order_bill_tel|order_country|order_email|order_fraud_status|order_max_amount|order_min_amount|order_name|order_payment_type|order_type|order_currency|page_number|

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Response Parameters

Name	Description	Note
status	This states whether the call was successful or	Value "0" denotes that the API
	not. If value of this parameter is "1" then you	call was successful.
	need not decrypt the enc_response as it will	Value "1" denotes API call
	contain plain error message.	failure. On enc_response is
		plain text represents the error
		message.
enc_response	AES encrypted response containing format as	
	per response_type	
order_amt	Amount for the transaction.	Decimal(12,2).
order_bill_address	Order billing address details for the order.	Possible value for address is
		Alphanumeric with special
		characters (space, hyphen,
		comma, ampersand(&), hash(#),
		circular brackets and dot)(315)
order_bill_city	Order billing City name for the order.	Possible value for city is
		Alphanumeric with special
		characters (space, comma,
		hyphen and dot)(30).
order_bill_country	Order billing country for the Order.	Possible value for country is
		Alphanumeric with special
		characters (space)(30).
order_bill_email	Email Address of the Order for notifications.	Possible value for email id is
		Alphanumeric with special
		characters (hyphen,
		underscore, dot,@)(70).
order_bill_name	Order billing name for the order.	Possible value for name is
		Alphanumeric with special
		characters (space, hyphen,

		apostrophe, underscore, dot)(60).
order_bill_state	Order billing state for the order.	Alphanumeric with special characters (hyphen, dot and space)(30).
order_bill_tel	Order billing telephone no for the order.	Numeric(10)
order_bill_zip	Order billing address's pincode for the order.	Possible value for zip is AlphaNumeric with special characters(hyphen and space) (15).
order_capt_amt	Captured amount for the transaction. Captured amount can be full or partial of the transaction amount.	Decimal(12,2).
order_curr	Possible order Currency in which merchant processed the transaction.	String Examples: INR – Indian Rupee USD – United States Dollar SGD – Singapore Dollar GBP – Pound Sterling EUR – Euro, official currency of Eurozone
order_date_time	Order Generated Date &Time.	DateTime in IST(yyyy-MM-dd HH:mm:ss.SSS) format.
order_device_type	This is the type of device using which the transaction was processed.	Possible value for device type is IVRS/MOB/PC.
order_discount	This is Discount Value for the Order No.	Decimal(12,2).
order_fee_flat	Flat Fee for the Order No.	Decimal(12,2).
order_fee_perc	Provides the percentage fee for the same order No.	Decimal(12,2).
order_fee_perc_value	This attribute provides the percentage fee Value for the same order No.	Decimal(12,2).
order_fraud_status	Specify whether orders are valid or not.	String Possible Values are: 1) Value "High" denotes "High Risk" 2) Value "Low" denotes "Low Risk" 3) Value "NR" denotes "No Risk" 4) Value "GA" denotes "Go Ahead" 5) Value "NA" denotes "Not Applicable"
order_gross_amt	Total transaction amount.	Decimal(12,2).
order_ip	Customer IP Address (i.e. from where transaction is being initiated)	IP V-4 Supported.

order_no	Order No for the transaction.	AlphaNumeric with special characters(hyphen and underscore)(30).
order_notes	Order information you wish to provide.	AlphaNumeric with special characters(space, comma, dot, hyphen and underscore)(60).
order_ship_address	Shipping Address for the order.	Possible value for address is Alphanumeric with special characters (space, hyphen, comma, ampersand(&), hash(#), circular brackets and dot)(315)
order_ship_city	Shipping city name for the orders.	Possible value for city is Alphanumeric with special characters (space, comma, hyphen and dot)(30).
order_ship_country	Shipping country name for the orders.	Possible value for country is Alphanumeric with special characters (space)(30).
order_ship_email	Shipping email ID for the notifications of the transaction.	Possible value for email id is Alphanumeric with special characters (hyphen, underscore, dot,@)(70).
order_ship_name	Shipping Name of the Customer for the order.	Possible value for name is Alphanumeric with special characters (space, hyphen, apostrophe, underscore, dot)(60).
order_ship_state	Shipping state for the order.	Alphanumeric with special characters (hyphen, dot and space)(30).
order_ship_tel	Telephone no for notifications of the transaction.	Numeric(10).
order_ship_zip	Order shipping address's pin code for the order.	Possible value for zip is AlphaNumeric with special characters(hyphen and space) (15).
order_status	Status of the order. It can be single or multiple	.String Possible values are: Aborted (transaction is cancelled by the User) Auto-Cancelled (transaction has not confirmed within 12 days hence auto cancelled by system) Auto-Reversed (two identical transactions for same order

Avenues®

		number, both were successful
		at bank's end but we got
		response for only one of them,
		then next day during
		reconciliation we mark one of
		the transaction as auto reversed
		the transaction as auto reversed
		Awaited (transportion is
		Awaited (transaction is
		processed from billing shipping
		page but no response is
		received)
		Cancelled (transaction is
		cancelled by merchant)
		Chargeback()
		Invalid(Transaction sent to
		CCAvenue with Invalid
		parameters, hence could not be
		processed further)
		Fraud (we update this during
		recon, the amount is different
		at bank's end and at CCAvenue
		due to tampering)
		Initiated (transaction just
		arrived on billing shipping page

		Unsuccessful (transaction is not
		successful due to)
order status date time	This is the latest date and time when order	DateTime in IST(yyyy-MM-dd
3. 200.2000_aacc_cillic	status is modified.	HH:mm:ss.SSS) format.
order_TDS	Amount of TDS (tax deducted at source) for	Decimal(13,4).
	the Transaction.	
order_tax	Tax Amount for the Transaction.	Decimal (13,4)
reference_no	CCAvenue reference no allocated to the	Numeric(25).
reference_no	transaction.	
order_bank_ref_no	Unique reference number share by Bank after	Numeric(25).
oraci_balik_lel_lib	successful transaction.	Namenc(23).
order_bank_response	Description about the transaction shared by	String
or del _nalik_reshouse	the bank after transaction.	Julia
	LITE DATIK ATLET LIATISACLIUTI.	

order_gtw_id	Unique payment option Bank name.	Alphabet(6)
order_card_name	Specify the card name for the transaction.	Possible value for card name is VISA", "MASTERCARD", "AMEX", "JCB", "ECRD", "DINERS CLUB", "DSNV", "CTBL", "CVMS".
order_option_type	Specify the payment option type for the order.	String Possible value for payment option type is OPTCASHC-Cash card OPTCRDC -Credit Card OPTDBCRD-Debit Card OPTEMI-EMI OPTIVRS-IVRS OPTMOBP-MobilePayments OPTNBK-Net Banking
error_desc	Reason if search criteria did not find the order for the transactions.	sString Please refer <u>below table</u> for failure message.
error_code	Error code for Failure reason.	String Please refer below table for failure message.
page_count	Total pages available based on no_of_records in the request	Example: no_of_records sent in request was 100
total_records	Total no.of orders matching the lookup criteria	total_records matching the lookup criteria were 1000 page_count will be 10 (total_records / no_of_records) rounded to the ceiling

6. Pending Orders

Pending API call allows you to find the list of pending orders. Only confirmed orders are settled into the merchant's account. An order older than 12 days is automatically canceled. Once an order has been auto-canceled by the system, it cannot be confirmed.

You can optionally confirm only part of an order. Remember, you can do so only once. Remaining funds will be refunded to the credit card or debit card or net banking account that was originally charged.

Request Parameters

Name	Description	Note
enc_request (required)	AES encrypted request data	
access_code	Unique CCAvenue access code which is	
(required)	generated when merchant registered their IP	
	address. You must send this with each	
	request.	
request_type	API requests are accepted in XML, JSON or	Possible value for request_type is
(required)	String. Specify the request type.	"XML" or "JSON" or "STRING".
response_type	API returns responses in XML, JSON or String	Possible value for response_type
(optional)	format. If left blank, the response will be in	is is "XML" or "JSON" or
	the same format as request.	"STRING".
Command	Command value specifies the API calls. You	Possible value for this API call is
(required)	must send this with each request.	"getPendingOrders".
reference_no	Unique CCAvenue reference number for the	Numeric(25)
(optional)	transaction.	
order_no	Unique Merchant order number for the	AlphaNumeric with special
(optional)	pending order of the transaction.	characters(hyphen and
		underscore)(30).
order_bill_name	Name of the customer to find invoice details	Alphanumeric with special
(optional)	after placing orders.	characters (space, hyphen,
		apostrophe, underscore, dot)(60).
order_email	Email id of customer to send mail for the	Alphanumeric with special
(optional)	generate invoice.	characters (hyphen, underscore,
		dot, @)(70).
order_bill_tel	Mobile number of the customer to send the	Numeric(10)
(optional)	generate invoice.	
order_fraud_status	Type of fraud status.	String
(optional)		Possible Values are:
		1) Value " High " denotes "High
		Risk"
		2) Value " Low " denotes "Low
		Risk"
		3) Value " NR " denotes "No Risk"

		4) Value " GA " denotes "Go Ahead" 5) Value " NA " denotes "Not Applicable"
order_currency (optional)	Currency in which you processed the transaction. You can send the multiple currencies format.	String Example:
		INR – Indian Rupee USD – United States Dollar SGD – Singapore Dollar
		GBP – Pound Sterling EUR – Euro, official currency of Eurozone
		Multiple currency format: INR USD GBP in XML & JSON request type and INR\$UDS\$GBP in STRING request type.
order_type (optional)	Type of the order.	String
		Different types of Orders: 1) OT-INV denotes "Invoice" 2) OT-ORD denotes "Orders" 3) OT-ORDSC denotes "Shopping Cart Orders" 4) OT-PPAY denotes" Phone Pay" 5) OT-SNIP denotes "SNIP orders"
page_number (required)	A limited number of records are shared as part of the response. The total records & number of pages are shared as part of the response to enable subsequent calls.	rt Numeric(4)

Example XML Request

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Example JSON Request

```
{
   "order_no": "XXXXXXX",
   "reference_no": "XXXXXXX",
   "order_bill_name": "XXXXXX",
   "order_email": "XXXX@XXXXXX.com",
   "order_bill_tel": "XXXXXXXXXXXXX",
   "order_fraud_status": "XX|XXXX|XXXX",
   "order_currency": "XXX|XXX|XXXX|XXXX",
   "order_type": "XX|XX-XX",
   "page_number": "1"
}
```

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Example STRING Request

Format:

```
reference_no|order_no|order_bill_name|order_bill_tel|order_currency$order_currency$order_currency$order_currency$order_fraud_status$order_fraud_status$order_fraud_status$order_type$order_type$order_type$page_number
```

Example:

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Response Parameters

Name	Description	Note
status	This states whether the call was successful or not. If value of this parameter is "1" then you need not decrypt the enc_response as it will contain plain error message.	
enc_response	AES encrypted response containing format as per response_type	
order_amt	Amount for the transaction.	Decimal(12,2).
order_bill_address	Order billing address details for the order.	Possible value for address is Alphanumeric with special characters (space, hyphen, comma, ampersand(&), hash(#), circular brackets and dot)(315)
order_bill_city	Order billing City name for the order.	Possible value for city is Alphanumeric with special characters (space, comma, hyphen and dot)(30).
order_bill_country	Order billing country for the Order.	Possible value for country is Alphanumeric with special characters (space)(30).
order_bill_email	Email Address of the Order for notifications.	Possible value for email id is Alphanumeric with special characters (hyphen, underscore, dot, @)(70).
order_bill_name	Order billing name for the order.	Possible value for name is Alphanumeric with special characters (space, hyphen, apostrophe, underscore, dot)(60).
order_bill_state	Order billing state for the order.	Alphanumeric with special characters (hyphen, dot and space)(30).
order_bill_tel	Order billing telephone no for the order.	Numeric(10)
order_bill_zip	Order billing address' pin code for the order.	Possible value for zip is AlphaNumeric with special characters(hyphen and space) (15).

order_capt_amt	Captured amount for the transaction. Captured amount can be full or partial of the transaction amount.	Decimal(12,2).
order_curr	Possible order Currency in which merchant processed the transaction.	String Examples: INR – Indian Rupee USD – United States Dollar SGD – Singapore Dollar GBP – Pound Sterling EUR – Euro, official currency of Eurozone
order_date_time	Order Generated Date &Time.	DateTime in IST(yyyy-MM-dd HH:mm:ss.SSS) format.
order_device_type	This is the type of device using which the transaction was processed.	Possible value for device type is IVRS/MOB/PC.
days_left	Number of days left to pay order amount.	Numeric(3)
order_discount	This is Discount Value for the Order No.	Decimal(12,2).
order_fee_flat	Flat Fee for the Order No.	Decimal(12,2).
order_fee_perc	Provides the percentage fee for the same order No.	Decimal(12,2).
order_fee_perc_value	This attribute provides the percentage fee Value for the same order No.	Decimal(12,2).
order_fraud_status	Specify whether orders are valid or not.	String Possible Values are: 1) Value "High" denotes "High Risk" 2) Value "Low" denotes "Low Risk" 3) Value "NR" denotes "No Risk" 4) Value "GA" denotes "Go Ahead" 5) Value "NA" denotes "Not Applicable"
order_gross_amt	Total transaction amount.	Decimal(12,2).
order_ip	Customer IP Address (i.e. from where transaction is being initiated)	IP V-4 Supported.
order_no	Order No for the transaction.	AlphaNumeric with special characters(hyphen and underscore)(30).
order_notes	Order information you wish to provide.	AlphaNumeric with special characters(space, comma, dot, hyphen and underscore)(60).
days_left	Number of days left to pay order amount.	Numeric (4).
order_bank_mid	Unique merchant id provided by issuer bank to merchant for the transaction.	

order_bank_ref_no	Unique reference number shared by Bank	Numeric(25).
	after successful transaction.	
order_bank_response	Description about the transaction shared by the bank after transaction.	String
order_gtw_id	Unique payment option Bank name.	Alphabet(6)
order_card_name	Specify the card name for the transaction.	Possible value for card name is VISA", "MASTERCARD", "AMEX", "JCB", "ECRD", "DINERS CLUB", "DSNV", "CTBL", "CVMS".
order_option_type	Specify the payment option type for the order.	Possible value for payment option type is OPTCASHC-Cash card OPTCRDC -Credit Card OPTDBCRD-Debit Card OPTEMI-EMI OPTIVRS-IVRS OPTMOBP-MobilePayments
order_card_type	Specify the card type used to pay order	OPTNBK-Net Banking String
	amount.	Possible value for card type is Cash card Credit Card Debit Card EMI IVRS Mobile Payments Net Banking
order_risk_mitigation	Specify whether the current order on risk	String(1)
	mitigation or not.	Possible value is "Y" or "N".
order_tax	Tax Amount for the Transaction.	Decimal (13,4)
 order_tran_status	Transaction status for the order coming from bank's end.	String Possible value is TS-AUTA- Authorization Awaited TS-AUTC- Authorization confirm TS-AUTCR- Authorization confirmed on reconciliation TS-AUTD- Authorization Declined TS-AUTDR- Authorization

Avenues®

		TS-AUTFR- Authorization Fraud TS-AUTFRR- Authorization Fraud on reconciliation TS-AUTFRAM- Amt mismatch TS-AUTFRCM - Currency mismatch TS-AUTFRUT- Authorization fraud TS-ABRTBNK- Aborted at bank's end.
order_type	Type of the order.	String Different types of Orders:
		1) OT-INV denotes "Invoice" 2) OT-ORD denotes "Orders" 3) OT-ORDSC denotes "Shopping Cart Orders" 4) OT-PPAY denotes" Phone Pay" 5) OT-SNIP denotes "SNIP orders"
order_ship_address	Shipping Address for the order.	Possible value for address is Alphanumeric with special characters (space, hyphen, comma, ampersand(&), hash(#), circular brackets and dot)(315)
order_ship_city	Shipping city name for the orders.	Possible value for city is Alphanumeric with special characters (space, comma, hyphen and dot)(30).
order_ship_country	Shipping country name for the orders.	Possible value for country is Alphanumeric with special characters (space)(30).
order_ship_email	Shipping email ID for the notifications of the transaction.	Possible value for email id is Alphanumeric with special characters (hyphen, underscore, dot, @)(70).
order_ship_name	Shipping Name of the Customer for the order.	Possible value for name is Alphanumeric with special characters (space, hyphen, apostrophe, underscore, dot)(60).
order_ship_state	Shipping state for the order.	Alphanumeric with special characters (hyphen, dot and space)(30).

order_ship_tel	Telephone no for notifications of the transaction.	Numeric(10).
order_ship_zip	Order shipping address' pin code for the o	rder. Possible value for zip is AlphaNumeric with special characters(hyphen and space) (15).
order_status	Status of the order. It can be single or multiple.	String Possible values are: Aborted (transaction is cancelled by the User) Auto-Cancelled (transaction has not confirmed within 12 days hence auto cancelled by system) Auto-Reversed (two identical transactions for same order number, both were successful at bank's end but we got response for only one of them, then next day during reconciliation we mark one of the transaction as auto reversed) Awaited (transaction is processed from billing shipping page but no response is received) Cancelled (transaction is cancelled by merchant) Chargeback() Invalid(Transaction sent to CCAvenue with Invalid parameters, hence could not be processed further) Fraud (we update this during recon, the amount is different at bank's end and at CCAvenue due to tampering) Initiated (transaction just arrived on billing shipping page and not processed further) Refunded (Transaction is refunded.) Shipped (transaction is refunded.) Shipped (transaction is confirmed) Successful

		System refund (Refunded by CCAvenue for various findings of reversals by CCAvenue) Unsuccessful (transaction is not successful due to)
order_status_date_time	This is the latest date and time when order status is modified.	DateTime in IST(yyyy-MM-dd HH:mm:ss.SSS) format.
order_TDS	Amount of TDS (tax deducted at source) for the Transaction.	Decimal(13,4).
reference_no	Unique CCAvenue reference no allocated to the transaction.	Numeric(25).
error_desc	Reason if search criteria did not find the orders for the transactions.	String Please refer <u>below table</u> for failure message.
error_code	Error code for Failure reason.	String Please refer below table for failure message.
page_count	Total pages available based on no_of_records in the request	Example: no_of_records sent in request was 100
total_records	Total no.of orders matching the lookup criteria	total_records matching the lookup criteria were 1000 page_count will be 10 (total_records / no_of_records) rounded to the ceiling

7. Delete Customer

The Delete Customer API call is used to delete the customer and all saved payment options for the customer.

Request Parameters

Name	Description	Note
enc_request	AES encrypted request data	
(required)		
access_code	Unique CCAvenue access code which is	
(required)	generated when merchant registered their IP	
	address. You must send this with each	
	request.	
request_type	API requests are accepted in XML, JSON or	Possible value for request_type is
(required)	String. Specify the request type.	"XML" or "JSON" or "STRING".
response_type	API returns responses in XML, JSON or String	Possible value for response_type
(optional)	format. If left blank, the response will be in	is is "XML" or "JSON" or
	the same format as request.	"STRING".
Command	Command value specifies the API calls. You	Possible value for this API call is
(required)	must send this with each request.	"delete Customer".
customer_id	Unique Customer ID provided by merchant to	Numeric(25)
(required)	the customer.	

Example XML Request

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Delete_Customer_Query customer_id="123"/>
```

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Example JSON Request

```
{
"customer_id": "1234"
}
```

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Example STRING Request

Format:customer_id|

Example: 1234|

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Response Parameters

Name	Description	Note
status	This states whether the call was successful or not. If value of this parameter is "1" then you need not decrypt the enc_response as it will contain plain error message.	call was successful.
enc_response	AES encrypted response containing format as per response_type	
deletion_status	Delete status - specify whether customer is going to be deleted successfully or not.	Numeric(1) Possible values for this is 0 - Deletion successful. 1 - Could not be deleted.
customer_id	Unique Customer ID for the deleted customer.	Numeric(25).
error_desc	Reason if customer is not going to be deleted successfully.	String Please refer <u>below table</u> for failure message.
error_code	Error code for Failure reason.	String Please refer <u>below table</u> for failure message.

Example XML Response

Success:

<?xml version="1.0" encoding="UTF-8" standalone="yes"?>

<Delete_Customer_Result deletion_status="0" error_code="" error_desc="">

<customer_id>1234</customer_id>

</Delete_Customer_Result>

Failure:

<Delete_Customer_Result error_desc="Customer id: Invalid parameter"deletion_status="1"
error_code="51325">

```
<customer_id>1234</customer_id>
</Delete_Customer_Result>
```

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

Example JSON Response

```
Success:
{
    "deletion_status":0,
    "error_desc":"",
    "error_code":"",
    "customer_id":"1234"
}

Failure:
{
    "error_desc":"Customer id: Invalid parameter",
    "deletion_status":1,
    "customer_id":"1234",
    "error_code":"51325"
}
```

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

Example STRING Response

Success:

Format:deletion_status|customer_id|

Example: 0 | 123 |

Failure:

Format: deletion_status|error_code|error_desc|customer_id|

Example: 1 | 51325 | Customer id: Invalid parameter | 123 |

8. Delete Customer Payment Option

The Delete Customer Payment Option API call is used to delete a particular payment option saved for the customer.

Request Parameters

Name	Description	Note
enc_request (required)	AES encrypted request data	
access_code (required)	Unique CCAvenue access code which is generated when merchant registered their IP address. You must send this with each request.	
request_type (required)	API requests are accepted in XML, JSON or String. Specify the request type.	Possible value for request_type is "XML" or "JSON" or "STRING".
response_type (optional)	,	Possible value for response_type is "XML" or "JSON" or "STRING".
Command (required)	Command value specifies the API calls. You must send this with each request.	Possible value for this API call is "deleteCustomerPaymentOption".
customer_id (required)	Unique Customer ID for the transaction.	Numeric(25).
customer_card_id (required)	Unique Customer card ID against the payment option for the transaction.	Numeric (25).

Example XML Request

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Example JSON Request

```
{
    "customer_id": "1234",
    "customer_card_id": "14"
}
```

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Example STRING Request

Format: customer_card_id|customer_id|

Example: 14 | 1234 |

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Response Parameters

Name	Description	Note
status	This states whether the call was successful or not. If value of this parameter is "1" then you need not decrypt the enc_response as it will contain plain error message.	call was successful.
enc_response	AES encrypted response containing format as per response_type	
customer_id	Unique Customer ID for the transaction.	Numeric(25).
customer_card_id	Unique Customer card ID against the payment Numeric (25). option for the transaction.	
deletion_status	Delete Status value specifies whether customer payment option is going to delete successfully or not.	Possible values for this is 0 - Deletion successful. 1 - Could not be deleted.
error_desc	Reason if customer payment option is not going to delete successfully.	String Please refer <u>below table</u> for failure message.
error_code	Error code for Failure reason.	String Please refer <u>below table</u> for failure message.

Example XML Response

Success:

```
customer_id="24"
customer_card_id="1234" error_code="" error_desc=""/>
```

Failure:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>

    customer_card_id="22"
    customer_id="123"
    error_desc="Customer Card Id: Invalid Parameter"
    error_code="51336"
    deletion_status="1"/>
```

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

Example JSON Response

```
Success:

{
    "customer_card_id":22,
    "deletion_status":0,
    "customer_id":123,
    "error_desc":"",
    "error_code":""
}

Failure:
{
    "customer_card_id":22,
    "deletion_status":1,
    "customer_id":123,
    "error_desc":"Customer Card Id: Invalid Parameter",
    "error_code":"51336"
}
```

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

Example String Response

Success:

Format: deletion_status|customer_card_id|customer_id| **Example:**0|1234|24|

Failure:

Format: deletion_status|error_code|error_desc|customer_card_id|customer_id|

Example:1|51327|Customer id: Invalid Parameter|22|123|

9. Get Customer Payment Options

The Customer payment option API call is used to list payment option saved for a customer. Payments options are saved for a customer in vault for easy and convenient payment.

Request Parameters

Name	Description	Note
enc_request	AES encrypted request data	
(required)		
access_code	Unique CCAvenue access code which is	
(required)	generated when merchant registered their IP	
	address. You must send this with each	
	request.	
request_type	API requests are accepted in XML, JSON or	Possible value for request_type is
(required)	String. Please specify the request type.	"XML" or "JSON" or "STRING".
response_type	API returns responses in XML, JSON or String	Possible value for response_type is
(optional)	format. If left blank, the response will be in	is "XML" or "JSON" or "STRING".
	the same format as request.	
Command	Command value specifies the API calls. You	Possible value for this API call is
(required)	must send this with each request.	"getCustomerPaymentOptions"
customer_id	Unique Customer ID for the transaction.	Numeric(25).
(required)		

Example XML Request

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

```
Example JSON Request
{
"customer_id": "1234"
}
```

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Example String Request

Format: customer_id|

Example: 6|

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Response Parameters

Name	Description	Note
status	This states whether the call was successful or not. If value of this parameter is "1" then you need not decrypt the enc_response as it will contain plain error message.	call was successful.
enc_response	AES encrypted response containing format as per response_type	
customer_id	Unique Customer ID for the transaction.	Numeric(25).
customer_card_no	Last four digit of card no for the transaction.	Numeric(4) Will contain values only for Credit card and Debit card
customer_payopt_type	Number of Payment options assign against to this customer id.	OPTNBK-net banking OPTCRD-credit card OPTDBRD-debit card OPTMOBP-mobile payment OPTIVRS- IVRS OPTWLT- Wallet OPTCASHC-Cash Card OPTEMI- EMI
customer_card_name	Customer card name for the transaction.	Alphanumeric with special characters (space, hyphen, apostrophe, underscore, dot)(60).
customer_email	Customer email id for the transaction.	Alphanumeric with special characters (hyphen, underscore, dot,@)(70).
customer_card_label	Customer card label name for the transaction.	
customer_card_id	Unique Customer card ID is the identifier for the payment options against the Customer ID.	Numeric(25).

customer_phone_numb	Unique Customer phone number for the	Numeric(10).
er	transaction.	
error_desc	Reason if API call does not find the record	String
	based on given search criteria.	Please refer <u>below table</u> for
		failure message.
error_code	Error code for Failure reason.	String
		Please refer <u>below table</u> for
		failure message.

Example XML Response

Success:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Customer_Payment_Option_Result customer_id="1234" error_desc="" error_code="">
 <pay_Opt_List>
   <customer>
      <customer card id>26</customer card id>
      <customer_card_no>4567</customer_card_id>
      <customer card name>Development Credit
      Bank</customer_card_name>
      <customer card type>NBK</customer card type>
      <customer_email>xxxx@xxxx.com</customer_email>
      <customer payopt type>OPTNBK</customer payment type>
       <customer_card_label>xxxxxxx</customer_card_label>
   </customer>
    <customer>
      <customer_card_id>27</customer_card_id>
     <customer card no>1234</customer card no>
     <customer_card_name>Development Credit Bank</customer_card_name>
     <customer_card_type>NBK</customer_card_type>
     <customer_email>xxxx@xxx.com</customer_email>
     <customer_payopt_type>OPTNBK</customer_payopt_type>
       <customer_card_label>xxxxxxx</customer_card_label>
   </customer>
 </pay_Opt_List>
</Customer_Payment_Option_Result>
Failure:
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Customer_Payment_Option_Result
      error_desc="Customer id: Invalid Parameter" customer_id="1234" error_code="51327"/>
```

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

```
Example JSON Response Success:
```

```
{
       "pay_Opt_List":[{
                      "customer_card_name":"Development Credit Bank",
                      "customer_card_type":"NBK",
                      "customer_card_id":26,
                      "customer email":"xxxx@xxx.com",
                      "customer payopt type":"OPTNBK"
                      "customer_card_label":"xxxxx"
                      "customer_card_no":"1234"
                      },
                      {
                      "customer_card_name":"MasterCard",
                      "customer_card_type":"CRDC",
                      "customer_card_id":27,
                      "customer_email":"xxxx@xxx.com",
                      "customer_payopt_type":"OPTCRDC",
                      "customer_card_label":"xxxxx"
                      "customer_card_no":"4567"
       "customer_id":"1234",
       "error desc":"",
       "error code":""
}
Failure:
{
       "error_desc": "Customer id: Invalid Parameter",
       "error_code":"51327",
       "customer_id":"1234"
}
```

Example STRING Response

Success:

Format: customer_card_id\$customer_card_no(last four digits)\$customer_card_name\$customer_card_type\$customer_payopt_type\$customer_card_label\$custo mer_email^ customer_card_id\$customer_card_no(last four digits\$customer_card_name\$customer_card_type\$customer_payopt_type\$customer_card_label\$customer_email

Example:27\$"1234"\$MasterCard\$CRDC\$OPTCRDC\$"xxxx"\$"xxxx@xxx.com"^29\$"4567"\$MasterCard\$CRDC\$OPTCRDC\$"xxxx"\$"xxxx@xxx.com"

Failure:

Format: error_code|error_desc|

Example: 51327 | Customer id: Invalid Parameter |

10. Generate Invoice

The Invoice API call is used to generate an invoice for a customer. Values can be passed as for generating invoice using the flexibility of Invoice settings.

Request Parameters

Name	Description	Note
enc_request (required)	AES encrypted request data	
access_code	Unique CCAvenue access code which is	
(required)	generated when merchant registered their IP	
	address. You must send this with each	
	request.	
request_type	API requests are accepted in XML, JSON or	Possible value for request_type is
(required)	String. Specify the request type.	"XML" or "JSON" or "STRING".
response_type	API returns responses in XML, JSON or String	Possible value for response_type
(optional)	format. If left blank, the response will be in	is "XML" or "JSON" or "STRING".
	the same format as request.	
command	Command value specifies the API calls. You	Possible value for this API call is
(required)	must send this with each request.	"generateInvoice".
customer_name	Name of the customer receiving the Invoice.	Alphanumeric with special
(required)		characters (space, hyphen,
		apostrophe, underscore, dot)(60).
customer_email_id	Email ID on which the Invoice will be sent	Alphanumeric with special
(required)		characters (hyphen, underscore,
		dot, @)(70).
	Subject of the email containing the Invoice	Alphanumeric with special
(required)		characters (hyphens, dot, space
		and underscores)(100).
_	Duration for which the Invoice is valid	Numeric(4).
(required)		
valid_type	The unit of duration represented by valid_for	Possible values for valid type is
(required)		minutes/hours/days/month/year
•	•	String
(required)	generated	
		Example:
		INR – Indian Rupee
		USD – United States Dollar
		SGD – Singapore Dollar
		GBP – Pound Sterling
		EUR – Euro, official currency of
		Eurozone

merchant_reference_no (optional)	Merchant identifier for the Invoice	Alphanumeric with special characters(hyphen and underscore)(25).
Amount (required	Invoice Amount	Decimal(12,2).
terms_and_conditions (optional)	Terms and conditions to be present in the Invoice	AlphaNumeric with special characters(hyphen, dot, circular brackets and ampersand)(500)
customer_mobile_numb er (required)	Mobile number of the customer receiving the Invoice	Numeric(10).
due_date (required)	Invoice Due date	Numeric(3)
late_payment_fees (conditional)	Fees to be charged in case of late payment. Late_payment_fees is required if merchant	Decimal(12,2).
late_payment_fees_typ	provide late_payment_fees_type. Unit representation of late_payment_fees.	Possible value for late payment
e (conditional)	Late_payment_fees type is required if merchant provide late_payment_fees.	fees type is Perc/Flat .
discount_if_paid_within _due_date (conditional)	Number of days prior to due date when an additional discount is eligible.	Numeric(3) Ex: due_date is 15 th Jan 2014 discount_if_paid_within_due_dat
	Discount_if_paid_within_due_date is required if merchant provide discount value or discount type.	
discount_value (conditional)	Discount to be applied if the above condition is true.	Decimal(12,2).
	Discount value is required if merchant provide discount type.	
discount_type (conditional)	Unit representation of discount_value. Discount type is required if merchant provide discount value.	Possible value for late payment fees type is Perc/Flat .
item_List (conditional)	Items associated with the Invoice. Provide at least one Item if merchant does not	Item type array. Refer to Item list section for structure.
task_List (conditional)	provide any Task. Tasks associated with the Invoice	Task type array. Refer to <u>Task list</u> section for structure.
	Provide at least one Task if merchant does not provide any Item.	

Item_List:

Name	Description	Note
name	Item Name	Alphanumeric with special
		characters (space, underscore,
		hyphen)(30).
description	Item description	Alphanumeric with special
		characters (hyphen, dot, circular
		brackets, space, comma,
		underscore, hash (#) and symbol
		&)(60)
unit_cost	Cost per Item	Decimal (12,2).
quantity	Quantity of item	Numeric(3).
tax_List	Tax associated with the Item	Tax type array. Refer to <u>Tax list</u>
		section for structure.

Task_List:

Name	Description	Note
name	Task Name	Alphanumeric with special
		characters (space, underscore and
		hyphen)(30).
notes	Notes for the task	Alphanumeric with special
		characters (hyphen, dot, circular
		brackets, space, comma ,
		underscore, hash (#) and symbol
		&)(60)
rate	Rate per hour	Decimal (12,2).
hours	Number of hours to be charged	Numeric(3).
tax_List	Tax associated with the task.	Tax type array. Refer to <u>Tax list</u>
		section for structure.

Tax_List:

Name	Description	Note
name	Tax list name	Alphanumeric with special
		characters (space, underscore
		and hyphen)(30).
amount	Amount of tax applicable	Decimal (13,4).

Note: Generate invoice without advance setting

11. Generate Recurring Invoice

Recurring invoice call is used to generate recurring invoice for a customer of a merchant.

Request Parameters

Name	Description	Note
enc_request	AES encrypted request data	
(required)		
access_code	This is the access code for your application.	
(required)	You must send this with each request.	
request_type	API requests are accepted in XML, JSON or	Possible value for request_type is
(required)	String. Specify the request type.	"XML" or "JSON" or "STRING".
response_type	API returns response in XML, JSON or String	Possible value for response_type
(optional)	format. If left blank, the response will be in	is is "XML" or "JSON" or
	the same format as request.	"STRING".
Command	Command value specifies the API calls. You	Possible value for this API call is
(required)	must send this with each request.	"generateRecurringInvoice"
customer_name	Name of the customer receiving the Invoice	Alphanumeric with special
(required)		characters (space, hyphen,
		apostrophe, underscore, dot)(60).
customer_email_id	Email ID on which the Invoice will be sent	Alphanumeric with special
(required)		characters (hyphen, underscore,
		dot,@)(70).
customer_email_subject	Subject of the email containing the Invoice	Alphanumeric with special
(required)		characters (hyphens, dot, space
		and underscores)(100).
valid_for	Duration for which the Invoice is valid	Numeric(4).
(required)		
valid_type	The unit of duration represented by valid_for	Possible values for valid type is
(required)		minutes/hours/days/month/year
Currency	Currency for which the Invoice is to be	String
(required)	generated	
		Example:
		INR – Indian Rupee
		USD – United States Dollar
		SGD – Singapore Dollar
		GBP – Pound Sterling
		EUR – Euro, official currency of
		Eurozone
merchant_reference_no	Merchant identifier for the Invoice	Alphanumeric with special
(optional)		characters(hyphen and
		underscore)(25).
Amount	Invoice Amount	Decimal(12,2).
(required		

customer_mobile_numb er Invoice Invoice Invoice Inverierd) due_date Invoice Due date Invoice Due date Invoice	cular 500)
(required) due_date (required) Invoice Due date (required) Numeric(3) Numeric(3) late_payment_fees (conditional) Fees to be charged in case of late payment. Late_payment_fees is required if merchant provide late_payment_fees_type. Decimal(12,2). late_payment_fees_typ Unit representation of late_payment_fees. Possible value for late payr fees type is required if merchant provide late_payment_fees. discount_if_paid_within Number of days prior to due date when an additional discount is eligible. Numeric(3) (conditional) Ex: due_date is 15 th Jan 20: discount_if_paid_within_due_date is required if merchant provide discount_type. Ex: due_date is 15 th Jan 20: discount_if_paid_within_d discount_value Discount type. 11 th Jan 2014. discount_value Discount to be applied if the above condition Decimal(12,2). (conditional) is true. Decimal(12,2). discount_type Unit representation of discount_value. Possible value for late payr fees type is Perc/Flat. discount_type Unit representation of discount_value. Possible value for late payr fees type is Perc/Flat. discount_type Unit representation of discount_value. Possible value for late payr fees type is Perc/Flat. Occurences Number of occurrences	
due_date (required) Invoice Due date Numeric(3) late_payment_fees (conditional) Fees to be charged in case of late payment. Late_payment_fees is required if merchant provide late_payment_fees_type. Decimal(12,2). late_payment_fees_type e (conditional) Unit representation of late_payment_fees. Unit representation of late_payment_fees. Possible value for late paymetes type is Perc/Flat. discount_if_paid_within _due_date (conditional) Number of days prior to due date when an additional discount is eligible. Discount_if_paid_within_due_date is required if merchant provide discount value or discount type. Numeric(3) Ex: due_date is 15 th Jan 20: discount_if_paid_within_d ie.e. Discount is applicable unitype. discount_value (conditional) Discount to be applied if the above condition is true. Decimal(12,2). discount_type (conditional) Unit representation of discount_value. Discount type is required if merchant provide discount value. Possible value for late payr fees type is Perc/Flat. Occurrences (conditional) Number of occurrences for Invoice (conditional) Numeric(3). Occurrences (conditional) Numeric(3).	
Iate_payment_fees Fees to be charged in case of late payment. Decimal(12,2).	
Iate_payment_fees (conditional)	
Late_payment_fees is required if merchant provide late_payment_fees_type.	
provide late_payment_fees_type.	
Late_payment_fees_typ Conditional Late_payment_fees type is required if merchant provide late_payment_fees. Late_payment_fees type is required if merchant provide late_payment_fees. Number of days prior to due date when an additional discount is eligible. Ex: due_date is 15 th Jan 2014	
e (conditional) Late_payment_fees type is required if merchant provide late_payment_fees. discount_if_paid_within Mumber of days prior to due date when an additional discount is eligible. 12. Generate Quick Invoice

This Quick invoice API call is used to generate a quick invoice for a customer. This is a flavour of regular invoice but with limited options hence an easy implementation.

Request Parameters

Name	Description	Note
enc_request	AES encrypted request data	
(required)		
access_code	This is the access code for your application.	
(required)	You must send this with each request.	
request_type	API requests are accepted in XML, JSON or	Value is "XML" or "JSON" or
(required)	String. Specify the request type.	"STRING".
response_type	API returns XML, JSON or String responses. If	Value is "XML" or "JSON" or
(optional)	left blank, the response will be in the same	"STRING".
	format as request.	
command (required)	This is the command to access the API Calls.	"generateQuickInvoice" for
	You must send this with each request.	generate Quick invoice.
customer_name	Name of the customer receiving the Invoice	Alphanumeric with special
(required)	rume of the eastorner receiving the invoice	characters (space, hyphen,
(regames)		apostrophe, underscore,
		dot)(60).
customer_email_id	Email ID on which the Invoice will be sent	Alphanumeric with special
(required)		characters (hyphen, underscore,
		dot, @)(70).
customer_email_subject	Subject of the email containing the Invoice	Alphanumeric with special
(required		characters (hyphens, dot, space
		and underscores)(100).
valid_for	Duration for which the Invoice is valid	Numeric(4)
(required)		
valid_type	The unit of duration represented by valid_for	Possible values for valid type is
(required)		minutes/hours/days/month/yea
		r
Currency	Currency for which the Invoice is to be	String
(required)	generated	
		Example:
		INR – Indian Rupee
		USD – United States Dollar
		SGD – Singapore Dollar
		GBP – Pound Sterling
		EUR – Euro, official currency of
.,		Eurozone
amount(required)	Invoice Amount for the generate invoice.	Decimal(12,2)

customer_mobile_numb	Mobile number of the customer receiving the	Numeric(10)
er	Invoice.	
(required)		
bill_delivery_type	Invoice delivery mechanism.	Possible value for bill delivery
(required)		type is EMAIL/SMS .
Files	Attachments to be sent with the quick invoice.	File type array described in below
(optional)	Applicable only if bill delivery type is EMAIL .	table.

Files:-

Name	Description	Note
Name (required)	Attachment file name which is passing at generate invoice time.	String File extension must be (.jpg .jpeg .doc .pdf .docx .png)format
Content (required)	Attachment file content must be in byte array format decoded with <i>decodeBase64</i> algorithm.	String(Attachment file size up to MOB)

Bill_delivery_type is SMS:

Xml request format:

```
Json Request Format:
```

```
"customer_name": "abc",
"bill_delivery_type": "SMS",
"customer_mobile_no": "1234569780",
```

Avenues®

```
"currency": "INR",
    "valid_for": "2",
    "valid_type": "days",
    "amount": "10.0",
    "sms_content": "Pls call 022-21212121 to pay your LegalEntity_Name bill # Invoice_ID for Invoice_Currency Invoice_Amount or pay online at Pay_Link.."
}
```

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

String Request Format:

customer_name|currency|valid_for|valid_type|amount|bill_delivery_type|mobile_no|sms_content|

Example:

xxxxxxx|INR|2|days|1.00|SMS|9874563215|Pls call 022-2121212121 to pay your LegalEntity_Name bill # Invoice_ID for Invoice_Currency Invoice_Amount or pay online at Pay_Link.|

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Bill_delivery_type is EMAIL:

XML Request Format:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Generate Invoice Query>
       <customer_name>abc</customer_name>

Note: If invoice not created successfully.

XML Response:

<Generate_Invoice_Result invoice_status="1" error_desc="Tax not configured for the merchant" error_code="51323"/>

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

Json Response:

```
{
    "error_desc":"Tax not configured for the merchant.",
    "error_code":"51323",
    "invoice_status":1
}
```

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

String Response:

Format:invoice_status|error_code|error_desc|

Example: 1|51323|Tax not configured for the merchant.|

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

13. Get Item List

Item list API call allows you to find all task and item list which is configured for the merchant.

Request Parameters

For Invoice Items, end request data is not required. Merchant has to send the command, Access code, request_type and response_type parameters only.

Name	Description	value
enc_request	AES encrypted request data	
(required)		
access_code	Unique CCAvenue access code which is	
(required)	generated when merchant registered their IP	
	address. You must send this with each request.	
request_type	API requests are accepted in XML, JSON or	Possible value for request_type is
(required)	String. Specify the request type.	"XML" or "JSON" or "STRING".
response_type	API returns XML, JSON or String responses. If	Possible value for response_type
(optional)	left blank, the response will be in the same	is "XML" or "JSON" or "STRING".
	format as request.	
Command	Command value specifies the API calls. You	Possible value for this API call is
(required)	must send this with each request.	"getInvoiceItems".

Request example:

Response Parameters

Name	Description	Note
status	This states whether the call was successful or not. If value of this parameter is "1" then you need not decrypt the enc_response as it will contain plain error message.	call was not successful.
enc_response	AES encrypted response containing format as per response type	
error_desc	This Attribute contains the description of the failure request processing. When status is 1 then this attribute will generate the reason for failure.	Please refer <u>below table</u> for the failure message.

error_code		String Please refer <u>below table</u> for failure message.
item_List	List of all item/task which is configured for	Item List type array. Refer to
	the merchant	Item List section for structure

Item List:

Name	Description	Note
description	Descriptive information about the Item/task.	Alphanumeric with special characters (hyphen, dot, circular brackets, space, comma, underscore, hash (#) and symbol &)(60).
name	Unique name of the Item/task for the generate invoice which is assigned against the merchant id.	Alphanumeric with special characters (space, hyphen, apostrophe, underscore, dot)(60).
type	Specify the item type provided.	Possible values for item type are ITEM/TASK.

Example XML Response

Success:

Failure:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Invoice_Item_Result status="1" error_desc="Enc_request: No record found for given criteria."
error_code="51419"/>
```

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

Example JSON Response

```
Success:
{
       "item List":[
               {"name":"HP","description":"QC","type":"ITEM"},
       {"name":"asdasd","description":"asdasd","type":"TASK"},
               {"name":"STG","description":"test","type":"ITEM"},
       {"name":"ITEM","description":"FIRST","type":"ITEM"},
       {"name":"TASK","description":"NEW","type":"TASK"},
       {"name":"TASK2","description":"NEW","type":"TASK"}
       1,
       "status":0,
       "error desc":"",
       "error code":""
}
Failure:
        "status":1,
        "error desc": "Enc request: No record found for given criteria.",
        "error_code":"51419"
}
```

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

Example STRING Response

Success:

Format: status | type\$name\$description^ type\$name\$description |

Example: 0|TASK\$First Task\$sgsdfgsfgsdfg^TASK\$Second Task\$Second task notes^TASK\$test\$test^ITEM\$Second Task\$akshay^ITEM\$test\$test|

Failure:

Format: status|error_code|error_desc|

Example: 1|51419|Enc_request: No record found for given criteria.|

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

14. Invoice Lookup

Invoice lookup API call is used to find the list of all invoices.

Request Parameters

Name	Description	value
enc_request	AES encrypted request data	
(required)		
access_code	Unique CCAvenue access code which is	
(required)	generated when merchants registered their IP	
	address. You must send this with each request.	
request_type	API requests are accepted in XML, JSON or	Possible value for request_type is
(required)	String. Specify the request type.	"XML" or "JSON" or "STRING".
response_type	API returns response in XML, JSON or String	Possible value for response_type
(optional)	format. If left blank, the response will be in the	is "XML" or "JSON" or "STRING".
	same format as request.	
Command	Command value specifies the API calls. You	Possible value for this API call is
(required)	must send this with each request.	"invoiceList".
from_date	Mandatory along with to_date if no other	Date must be dd-mm-yyyy
(conditional)	criteria mentioned	format.
to_date	Mandatory along with from_date if no other	Date must be dd-mm-yyyy
(conditional)	criteria mentioned	format.
max_amount	Max amount of the invoice to be searched	Decimal(12,2)
(optional)		
min_amount	Min amount of the invoice to be searched	Decimal(12,2)
(optional)		
created_by	Unique identification of the merchant for the	String(Unique id of Merchant)
(optional)	generate invoice.	
mobile_no	Customer mobile number for the generate	Numbers(10)
(optional)	invoice.	
email_id	Customer email id for the generate invoice.	Alphanumeric with special
(optional)		characters (hyphen, underscore,
		dot, @)(70).
reference_no	Unique CCAvenue reference number for the	Numeric(25)
(optional)	transaction.	
invoice_id	Unique CCAvenue bill id for the generate	Numeric value(25)
(optional)	invoice.	
invoice_type	Provide only possible value of the invoice type.	The possible values for invoice
(optional)		type is quick/invoice/recurring
page_no	The default value of page no is 1.	Number(1)
(required)		

Request:

XML Format:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Invoice_List_Query>
       <from_date>10-09-2014</from_date>
       <to date>11-09-2014</to date>
       <max_amt>12.00</max_amt>
       <min_amt>1.00</min_amt>
       <created_by>xxx</created_by>
       <invoice_email>xxx@xx.xxx</invoice_email>
       <invoice mobile no>1234567890</invoice mobile no>
       <reference_no>1234</reference_no>
       <invoice id>321</invoice id>
       <invoice_no>345678</invoice_no>
       <invoice_type>TASK/ITEM</invoice_type>
       <invoice_type_name>Task</invoice_type_name>
       <page_count>1</page_count>
/Invoice_List_Query>
```

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

JSON Format:

```
{
    "from_date":"10-10-2014",
    "to_date":"11-10-2014",
    "max_amt":"10.00",
    "min_amt":"1.00",
    "created_by":"xxxx",
    "invoice_email":"xxxx@xxx.com",
    "invoice_mobile_no":"1234569871",
    "reference_no":"123654",
    "invoice_id":"123",
    "invoice_no":"147852",
    "invoice_type":"item/task",
    "invoice_type_name":"task",
    "page_count":"1"
}
```

Note: You will have to encrypt the above request and store in the "enc request" parameter before

sending it to CCAvenue. Kindly refer to the encryption section.

String Format:

FromDate|ToDate|max_amount|min_amount|created_by|mobile_no|email_id|reference_no|invoice_id|invoice_no|invoice_type|invoice_type_name|page_no|

Example: 11-10-2014 | 12-10-

2014 | 10.00 | 1.00 | xxxx | 1236547895 | xxxx@xx.com | 123654789 | 741258 | 45698741 | task | FIRST | 1 |

Response Parameters

Name	Description	Note
status	This states whether the call was successful or not. If value of this parameter is "1" then you need not decrypt the enc_response as it will contain plain error message.	Value "0" denotes that the API call was successful. Value "1" denotes API call failure. On enc_response is plain text representing the error message.
enc_response	AES encrypted response containing format as per response_type	
Invoice_ID	Unique CCAvenue bill id for the generate invoice.	Numeric(25).
Invoice_ref_no	Merchant identifier for the Invoice	Alphanumeric with special characters(hyphen and underscore)(25).
Invoice_created_by	Unique merchant ID for the generate invoice.	String(70).
order_no	Order No for the transaction.	AlphaNumeric with special characters(hyphen and underscore)(30).
order_amt	Amount for the transaction.	Decimal(12,2).
order_bill_address	Order billing address details for the order.	Possible value for address is Alphanumeric with special characters (space, hyphen, comma, ampersand(&), hash(#), circular brackets and dot)(315)
order_bill_city	Order billing City name for the order.	Possible value for city is Alphanumeric with special characters (space, comma, hyphen and dot)(30).
order_bill_country	Order billing country for the Order.	Possible value for country is Alphanumeric with special characters (space)(30).
order_bill_email	Email Address of the Order for notifications.	Possible value for email id is Alphanumeric with special characters (hyphen, underscore, dot,@)(70).
order_bill_name	Order billing name for the order.	Possible value for name is Alphanumeric with special characters (space, hyphen, apostrophe, underscore, dot)(60).

order_bill_state	Order billing state for the order.	Alphanumeric with special characters (hyphen, dot and space)(30).
order_bill_tel order_bill_zip	Order billing telephone no for the order. Order billing address' pin code for the order.	Numeric(10) Possible value for zip is AlphaNumeric with special characters(hyphen and space) (15).
order_capt_amt	Captured amount for the transaction. Captured amount can be full or partial of the transaction amount.	Decimal (12,2)
order_curr	Possible order Currency in which merchant processed the transaction.	String Examples: INR – Indian Rupee USD – United States Dollar SGD – Singapore Dollar GBP – Pound Sterling EUR – Euro, official currency of Eurozone
order_date_time	Order Generated Date &Time.	DateTime in IST(yyyy-MM-dd HH:mm:ss.SSS) format.
order_device_type	This is the type of device using which the transaction was processed.	Possible value for device type is IVRS/MOB/PC.
order_discount	This is Discount Value for the Order No.	Decimal(12,2).
order_fee_flat	Flat Fee for the Order No.	Decimal(12,2).
order_fee_perc	Provides the percentage fee for the same order No.	Decimal(12,2).
order_fee_perc_value	This attribute provides the percentage fee Value for the same order No.	Decimal(12,2).
order_fraud_status	Specify whether orders are valid or not.	String Possible Values are: 1) Value "High" denotes "High Risk" 2) Value "Low" denotes "Low Risk" 3) Value "NR" denotes "No Risk" 4) Value "GA" denotes "Go Ahead" 5) Value "NA" denotes "Not Applicable"
order_gross_amt	Total transaction amount.	Decimal(12,2).
order_ip	Customer IP Address (i.e. from where transaction is being initiated)	IP V-4 Supported.
order_no	Order No for the transaction.	AlphaNumeric with special characters(hyphen and

		underscore)(30).
order_notes	Order information you wish to provide.	AlphaNumeric with special characters(space, comma, dot,
		hyphen and underscore)(60).
order_ship_address	Shipping Address for the order.	Possible value for address is
order_sinp_dddress	Simpling Address for the order.	Alphanumeric with special
		characters (space, hyphen,
		comma, ampersand(&),
		hash(#), circular brackets and
		dot)(315)
order_ship_city	Shipping city name for the orders.	Possible value for city is
		Alphanumeric with special
		characters (space, comma,
		hyphen and dot)(30).
order_ship_country	Shipping country name for the orders.	Possible value for country is
		Alphanumeric with special
		characters (space)(30).
order_ship_email	Shipping email ID for the notifications of the	Possible value for email id is
	transaction.	Alphanumeric with special
		characters (hyphen,
		underscore, dot, @)(70).
order_ship_name	Shipping Name of the Customer for the order.	Possible value for name is
		Alphanumeric with special
		characters (space, hyphen,
		apostrophe, underscore,
andan ship state	Chinning state for the order	dot)(60).
order_ship_state	Shipping state for the order.	Alphanumeric with special
		characters (hyphen, dot and space)(30).
order_ship_tel	Telephone no for notifications of the	Numeric(10).
order_snip_ter	transaction.	Numeric(10).
order_ship_zip	Order shipping address' pin code for the order.	Possible value for zip is
		AlphaNumeric with special
		characters(hyphen and space)
		(15).
order_status	Status of the order. It can be single or multiple.	String
		Possible values are:
		Aborted (transaction is
		cancelled by the User)
		Auto-Cancelled (transaction
		has not confirmed within 12
		days hence auto cancelled by
		system)
		Auto-Reversed (two identical
		transactions for same order
		number, both were successful

Avenues®

		at bank's end but we got response for only one of them, then next day during reconciliation we mark one of the transaction as auto reversed) Awaited (transaction is processed from billing shipping page but no response is received) Cancelled (transaction is cancelled by merchant) Chargeback() Invalid(Transaction sent to CCAvenue with Invalid parameters, hence could not be processed further) Fraud (we update this during recon, the amount is different at bank's end and at CCAvenue due to tampering) Initiated (transaction just arrived on billing shipping page and not processed further) Refunded (Transaction is refunded.) Shipped (transaction is confirmed) Successful System refund (Refunded by CCAvenue for various find of reversals by CCAvenue) Unsuccessful (transaction is not successful)
	This is the latest date and time when order status is modified.	DateTime in IST(yyyy-MM-dd HH:mm:ss.SSS) format.
_	Amount of TDS (tax deducted at source) for the Transaction.	Decimal(13,4).
reference_no	Unique CCAvenue reference no for the transaction.	Numeric(25).
	This Attribute contains the description of the failure request processing. When status is 1 then this attribute will generate the reason for failure.	Please refer <u>below table</u> for the failure message.
error_code	Error code for Failure reason.	String

		Please refer <u>below table</u> for failure message.
page_count	Total pages available based on no_of_records	Numeric(25).
	in the request	
total_records	Total no.of orders matching the lookup	
	criteria.	

Example XML Response

Success:

```

15. Update Invoice Reference Number

Update Invoice reference Number API call is used to update Invoice reference number if the same was not provided at the time of invoice generation.

Request Parameters:

Name	Description	value
enc_request (required)	AES encrypted request data	
access_code (required)	Unique CCAvenue access code which is generated when merchant registered their IP address. You must send this with each request.	
request_type (required)	API requests are accepted in XML, JSON or String. Specify the request type.	Possible value for request_type is "XML" or "JSON" or "STRING".
response_type (optional)	API returns response in XML, JSON or String format. If left blank, the response will be in the same format as request.	Possible value for response_type is is "XML" or "JSON" or "STRING".
Command (required)	Command value specifies the API calls. You must send this with each request.	Possible value for this API call is "updateBillMerchantReferenceNo"
bill_id (required)	Unique CCAvenue Bill id(invoice id) for the generated invoice.	Numeric value(25)
merchant_ref_no (required)	Unique reference no shared by merchant to update against CCAvenue bill id(invoice id).	Alphanumeric with special characters(hyphen and underscore)(25).

Request format:

XML Format:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Update_Bill_Merchant_Reference_No_Query>
    <bill_id>1234566</bill_id>
    <mer_reference_no>12354</mer_reference_no>
</Update_Bill_Merchant_Reference_No_Query>
```

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

JSON Format:

```
{
    "bill_id":"123456",
    "mer_reference_no":"123654"
}
```

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

String Format:

Format: Bill_id|merchant_reference_no|

Example: 123456 | 123654 |

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Response Parameters

Name	Description	Note	
This states whether the call was successful or not. If value of this parameter is "1" then you need not decrypt the enc_response as it will contain plain error message.		Value "0" denotes that the API call was successful. Value "1" denotes API call failure. On enc_response is plain text representing the error message.	
enc_response	AES encrypted response containing format as per response_type		
error_desc	Failure reason if update merchant reference number is not going to be updated successfully for the generated invoice.	Please refer <u>below table</u> for the failure message.	
error_code	Error code for Failure reason.	String Please refer <u>below table</u> for failure message.	
update_status	Merchant update status specifies the status of update merchant reference number.	Numeric(1) "0" means update merchant reference number was successful. "1" means merchant reference number was not successfully updated.	

Response Format:

XML Format:

Success:

<?xml version="1.0" encoding="UTF-8" standalone="yes"?>

<Update_Merch_Ref_No_Result update_status="0" error_code="" error_desc=""/>

Failure:

<?xml version="1.0" encoding="UTF-8" standalone="yes"?>

<Update_Merch_Ref_No_Result update_status="1" error_desc="Bill Merchant Reference No: Invalid
Parameter"</pre>

error_code="51320"/>

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

JSON Format:

```
Success:
{
          "update_status":0,
          "error_desc":,
          "error_code":
}

Failure:
{
          "error_desc":"bill_id: Invalid Parameter",
          "update_status":1,
          "error_code":"51319"
}
```

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

String Format:

Success Format: update_status |

Example: 0

Failure Format: update_status|error_code|error_desc|

Example: 1 | 51320 | Bill Merchant Reference No: Invalid Parameter |

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

16. Update Merchant Params

Update Merchant params API is used to add some extra parameter against Reference no if the same could not be done at the time of the transaction.

Request Parameters:

Name	Description	value
enc_request	AES encrypted request data	
(required)		
access_code	Unique CCAvenue access code which is	
(required)	generated when merchant registered their IP	
	address. You must send this with each	
	request.	
request_type	API requests are accepted in XML, JSON or	Possible value for request_type is
(required)	String. Specify the request type.	"XML" or "JSON" or "STRING".
response_type	API returns XML, JSON or String responses. If	Possible value for response_type
(optional)	left blank, the response will be in the same	is "XML" or "JSON" or "STRING".
	format as request.	
command	Command value specifies the API Calls. You	Possible value for this API call is
(required)	must send this with each request.	"updateMerchantParams"
reference_no	Unique CCAvenue reference number for the	Numeric(25)
(required)	transaction.	
param_value	Merchant can update one param value against	Alphanumeric with special
(required)	unique reference no after placing order.	characters(comma, hyphen,
		backslash and dot)(100)
param_value1	Merchant can update one param value against	Alphanumeric with special
(optional)	unique reference no after placing order.	characters(comma, hyphen,
		backslash and dot)(100)
param_value2	Merchant can update one param value against	Alphanumeric with special
(optional)	unique reference no after placing order.	characters(comma, hyphen,
		backslash and dot)(100)
param_value3	Merchant can update one param value against	Alphanumeric with special
(optional)	unique reference no after placing order.	characters(comma, hyphen,
		backslash and dot)(100).
param_value4	Merchant can update one param value against	Alphanumeric with special
(optional)	unique reference no after placing order.	characters(comma, hyphen,
		backslash and dot)(100)

Request format:

XML Format:

<?xml version="1.0" encoding="UTF-8" standalone="yes"?> <Update_Merchant_Params_Query>

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

JSON Format:

```
{
    "reference_no":"123654",
    "param_value":"10",
    "param_value1":"11",
    "param_value2":"22",
    "param_value3":"33",
    "param_value4":"44"
}
```

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

String Format:

Format: Reference_no|Param_value1|Param_value2|Param_value3|Param_value4|Param_value5|

Example: 123456|10|11|22|33|44|

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Response Parameters

Name	Description	Note	
status	This states whether the call was successful or not. If value of this parameter is "1" then you need not decrypt the enc_response as it will contain plain error message.	Value "0" denotes that the API call was successful. Value "1" denotes API call failure On enc_response is plain text representing the error message.	
enc_response	AES encrypted response containing format as per response_type		
error_desc	Failure reason if API call does not update/add param value.	Please refer <u>below table</u> for failure message.	
error_code	Error code for Failure reason.	String Please refer below table for failure message.	
update_status	Update status contains merchant parameter if add/update was successful or not.	"0" means update merchant parameter value was successful. "1" means update merchant param value was not successful.	

Response I	Format:
------------	---------

XML Format:

Success:

<?xml version="1.0" encoding="UTF-8" standalone="yes"?>

<Update_Merchant_Param_Result update_status="0" error_code="" error_desc=""/>

Failure:

<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Update_Merchant_Param_Result error_desc="Reference number: Invalid Parameter"
update_status="1" error_code="51322"/>

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

JSON Format:

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

String Format:

Success Format: update_status |

Example: 0

Failure Format: update_status|error_code|error_desc|

Example: 1 | 51322 | Reference number: Invalid Parameter |

Note: You will have to decrypt the above response from "enc_response" parameter. Kindly refer to the decryption section.

17. Update Billing Details

Update billing details API call is used to update customer billing information against an order.

Request Parameters:

Name	Description	value
enc_request	AES encrypted request data	
(required)		
access_code	Unique CCAvenue access code which is	
(required)	generated when merchant registered their IP	
	address. You must send this with each	
	request.	
request_type	API requests are accepted in XML, JSON or	Possible value for request_type
(required)	String. Specify the request type.	is "XML" or "JSON" or "STRING".
response_type	API returns XML, JSON or String responses. If	Possible value for
(optional)	left blank, the response will be in the same	response_type is "XML" or
	format as request.	"JSON" or "STRING".
command	Command value specifies the API Calls. You	Possible value for this API call
(required)	must send this with each request.	is "updateBillingDetails"
reference_no	Unique CCAvenue reference no for the	Numeric value(25).
(required)	transaction.	
bill_name	Billing name for the order	Alphanumeric with special
(required)		characters (space, hyphen,
		apostrophe, underscore,
		dot)(60).
bill_email	Billing email id for order	Alphanumeric with special
(required)		characters (hyphen,
	D:11:	underscore, dot, @)(70).
bill_address	Billing address for order	Alphanumeric with special
(required)421=Unsupport		characters (space, hyphen,
ed version for the API		comma, ampersand(&),
call.		hash(#), circular brackets and dot)(315)
bill_city	Billing city for order	Alphanumeric with special
(required)	Simily City for Order	characters (space, comma,
, equil cuj		hyphen and dot)(30).
bill_state	Billing state for order	Alphanumeric with special
(required)	3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3	characters (hyphen, dot and
, , , , , , , , , , , , , , , , , , , ,		space)(30).
bill_country	Billing country for order	Alphanumeric with special
(required)	- ,	characters (space)(30).
bill_zip	Billing zip for order	AlphaNumeric with special
(required)		characters(hyphen and space)

(15).

Request format:

XML Format:

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

JSON Format:

```
{
    "reference_no":"123456",
    "bill421=Unsupported version for the API call._name":"bill name",
    "bill_email":"zgfs.sdgf@sfdg.com",
    "bill_address":"santacruz(west)",
    "bill_city":"mumbai",
    "bill_state":"maharashtra",
    "bill_country":"india",
    "bill_zip":"400000"
}
```

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

String Format:

Format: Reference No | Billing Name | Bill Email ID | Bill Address | Bill City | Bill State | Bill Country | Bill Zip |

Example: 123456|bill name|xxx@xxx.com|santacruz(west)|mumbai|maharashtra|india|400054|

Note: You will have to encrypt the above request and store in the "enc_request" parameter before sending it to CCAvenue. Kindly refer to the encryption section.

Response Parameters

Name	Description	Note	
status421=Unsupported version for the API call.			
enc_response	AES encrypted response containing format as per response_type		
error_desc	Failure reason if billing details are not updated successfully.	String Please refer <u>below table</u> for failure message.	
error_code	Error code for Failure reason.	String Please refer <u>below table</u> for failure message.	
update_status	Update_status denotes whether Billing information have been updated successfully or not.	"0" means update billing details was successful. "1" means billing details are not successfully updated.	

Response Fori	mat:
---------------	------
